

The Nitty Gritty of Adding Subfield 0 to MARC Records

Motivation

- * Encouraged by many presentations of Jackie Shieh which advocated pursuing this action to prepare MARC records
- * Partnering with Zepheira and Atlas Systems to add our Special Collections Records (Wittliff Collections & Archives) as linked data on the Library.Link Network platform (<http://link.library.txstate.edu/>)
 - * Zepheira gave an enthusiastic “Yes” when asked if it would be helpful to add \$0 to records
- * Terry Reese through MARCEdit has developed user-friendly way to add these \$0

Overview of Process

- * Export records out of catalog
- * Fire up MarcEdit and use MarcNext (Link Identifiers option) to add subfields to record
- * Can take a few hours to a day or more depending on size of load
 - * Initially processed a base load and am doing updates with new records. Will do another base load at least annually
- * Then import modified records back into catalog

Build Linked Records

The Linked Data Tool has been designed to loop through a set of MARC records and resolve access points in the 1xx, 6xx, and 7xx data

Indexing Issues: Into the Depths

- * Not as easy to fix, particularly if your vendor charges re-indexing fees*

#	Description
1	+ Finn, Huckleberry (Fictitious character)
2	+ Finn, Huckleberry (Fictitious character) Drama.
3	+ Finn, Huckleberry (Fictitious character) Drama. http://id.loc.gov/authorities/subjects/sh2009124341
4	+ Finn, Huckleberry (Fictitious character) Fiction.
5	+ Finn, Huckleberry (Fictitious character) Juvenile fiction.

- * Will cause problems with authority work in your catalog
 - * Display (will appear on another line)
 - * Appear in authority control reports when the heading is otherwise identical
 - * Verify feature in Sierra doesn't work properly

*Even if they purport to support linked data (apparently only support for a fee).

What is this link doing in our records?

- * General announcement to Library MARC workers
- * Workflow issues
 - * What if you're overlaying/recataloging records?
 - * What if the matched heading is wrong? Should staff just delete or replace?

Advantages

- * Moving MARC records incrementally closer to linked data
- * In our system, can right click on URL and see authority record
