

ArticleSelect Tokens

A flexible approach to accessing
Wiley InterScience

www.interscience.wiley.com

What is accessible?

Journals – 1,400+

OnlineBooks™ – 6,300+

Major Reference Works – 90+

Current Protocols - 16

Benefits of ArticleSelect Tokens

- **Diverse content** – access journals, backfiles, Onlinebooks, major reference works, Current Protocols, and Cochrane
- **Flexible pricing** – discounts available based on the number of tokens you purchase
- **Usage statistics** – provided, giving you better information to manage your library
- **Conversion of subscriptions** – When you use purchased tokens on a journal equal to 115% of the list price of the title, Wiley-Blackwell will open that product up for unlimited access with no more tokens needed for the calendar year
- **Multiple authentication methods** – from seamless IP access to SuperUser control with confirmation screen

Who uses tokens?

Academic Institutions

- 2 and 4 year institutions
- Looking for access to much more than just a few core subscriptions
- Great way to access backfiles
- Fill in smaller requests for professors' course packs

Corporate Institutions

- Looking for access to content right away (quicker than doc del)
- Lesser interest in archival rights
- Fill in gaps on lesser user areas of interest

Not-for-profit Institutions

- Too small to buy full rate subscriptions
- No, or decentralized library

Risk vs. Reward

Cost

- Do not have to subscribe to the whole work
- Get the most content available for one smaller, known cost however
- Access runs out when tokens run out; library have to purchase more tokens to ensure access early in the year

Technology

- Currently one cost per token no matter the content however
- Current method does not allow for knowing who is using tokens

Content

- Great for space saving in physical space & for virtual libraries however
- No archival rights
