

Practicing Self-care on the Job in Technical Services

Janetta Waterhouse

March 8, 2024

Perfection is a common mantle taken up by technical services staff. Unfortunately, that may involve overly complex approaches to acquisitions, electronic resource management, and cataloging activities that can be a burden to staff workloads. Some technical services staff adopt complicated or exceptionally thorough workflows as best practices for creating the perfect work product. When viewed through a different lens it appears that they are effectively paying themselves less by doing extra work for the same salary.

Self Care

Infrastructure

Hyper-efficient
workflows

Modified expectations

Not all of these will be applicable...pick and choose what is easiest to get buy in and implement or what will have the greatest impact.

Some may be scary...try them anyway, if you think they will decrease workloads.

Infrastructure

Simplify ledgers, funds

1 invoice per vendor

Spread the work out (mo, yr)

No 4th quarter renewals

Leverage technology

Workflows

Do *only* what is needed

Find automatic way to doublecheck

Don't fear audits

Let vendors, community manage data

Leverage technology

Modified Expectations

Ask for help

Set aside gold standard for some work

Set aside perfection

Lean into the network effect

Improve your risk tolerance

Leveraging Technology

Learn your systems, ask vendors for help

Put data in the right fields

Minimize use of notes

Automate using EDI, auto loads, API integrations

Spend time on updates to minimize work

Create dashboards, widgets

Use APIs to move data between systems

Ask for help, express needs

General

Try a different mindset

Try a new way of doing things

Make work easy for people

Safe to fail experiments, NOT fail safe design
